HIGH QUALITY PRODUCTS FOR THE BUILDING INDUSTRY

Bay & Porch Roofs

NO-LEAD

High Performance Aluminium Flashing

NO
Re-Sale
Value

NO-LEAD has:

- **20 years+ Life Expectancy**
- **Is easy to install**
- **Is Light and needs no additional sealant or tape**
- **High performance adhesive for a permanent bond**

Key Features

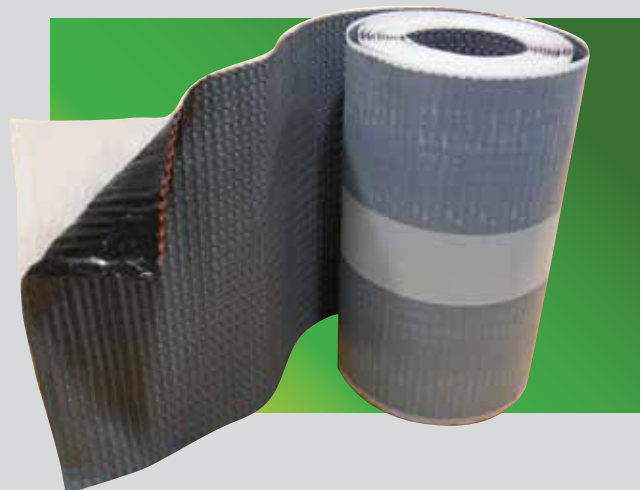

- Low Cost
- Waterproof
- Durable
- Alternative to Traditional Lead
- Malleable
- Lightweight
- Easy Cut
- Easily Repaired
- No Re-sale Issues

No-Lead is aluminium based, high performance, low cost flashing. It is used as a replacement of traditional lead in flat and pitched roof.

No-Lead is made of sheet aluminium with a protective anti-corrosion coating and a high performance butyl adhesive on the underside.

No-Lead doesn't require any special tools for installation. It can be cut with a knife or scissors.

Sizes Available: 150mm x 5M, 300mm x 5M, 450mm x 5M

Bay & Porch Roofs

Duo-pitch lead effect bay roofs provide instant kerb appeal for the prospective buyer. Flat, mono and hipped porch roofs featuring a wide range of slate and tile effects and colours can be fitted quickly and economically without resorting to heavy lifting gear.

Hipped Porch Roof

GRP roof colours:

- In addition to the standard colours shown, we can provide products to any BS or RAL colour
- UV stabilisers are added to the gel coat finishes to minimise colour degradation
- Colour fastness figures are available on request

the 1990s, the number of people in the UK who are employed in the public sector has increased from 10.5 million to 12.5 million, and the number of people in the public sector who are employed in health care has increased from 2.5 million to 3.5 million (Department of Health 2000).

There are a number of reasons for this increase. One of the main reasons is the increasing demand for health care services. The population of the UK is ageing, and there is a growing number of people with chronic conditions such as heart disease, diabetes, and asthma. This has led to an increase in the number of people who need to be treated in hospitals and other health care settings.

Another reason for the increase is the expansion of the public sector. The government has invested heavily in health care over the past few decades, and this has led to an increase in the number of hospitals, clinics, and other health care facilities. This has created a need for more health care workers to staff these facilities.

There are also a number of other factors that have contributed to the increase in the number of health care workers. For example, there has been a growing emphasis on patient safety and quality of care, which has led to an increase in the number of people who are trained in health care. This has also led to an increase in the number of people who are employed in health care.

Despite the increase in the number of health care workers, there is still a shortage of health care workers in many areas. This is particularly true in the areas of nursing, medicine, and dentistry. This is due to a number of factors, including the fact that many people who are trained in health care do not stay in the profession, and the fact that there is a high level of turnover in the health care workforce.

There are a number of ways in which the health care workforce can be expanded. One way is to increase the number of people who are trained in health care. This can be done by increasing the number of places in health care training programmes, and by providing more support for people who are studying for health care qualifications.

Another way to expand the health care workforce is to encourage more people to stay in the profession. This can be done by providing more support for health care workers, and by creating a more attractive working environment. This can be done by increasing the pay and benefits of health care workers, and by providing more opportunities for career advancement.

There are also a number of other ways in which the health care workforce can be expanded. For example, it is possible to recruit health care workers from other countries. This has been done in the past, and it is possible to do so again. This would involve recruiting health care workers from countries where there is a surplus of health care workers, and then providing them with the necessary training and support to work in the UK.

There are a number of challenges that must be overcome in order to expand the health care workforce. One of the main challenges is the need to increase the number of people who are trained in health care. This will require a significant investment in health care training, and it will also require a change in the way in which health care training is delivered.
